BY AUSTRALIAN  
SECURITY FENCING P/L

# RAZAR TAPE®

## APPLICATIONS

- Prisons • Factories and Industrial sites • Military Installations • Refineries
- Government Buildings • Power Stations • Airports • Temporary Barriers • Police Stations

## TOTAL SECURITY

Razar Tape® products have been designed to prevent intrusion along perimeter barriers.

Razar Tape® is visually frightening to even the most aggressive intruder and is difficult to climb and cut. These properties make it an effective form of security fencing.

# RAZAR TAPE®

## HEADER HEADER HEADER HEADER HEADER HEADER

**A**ustralian Security Fencing Pty Ltd's range of high security Razar Tape® products has been designed to prevent intrusion along perimeter boundaries. Razar Tape® confronts even the most aggressive intruder with a visually frightening appearance. Razar Tape® barriers are extremely difficult to cut or climb as their physical shape forces intruders away from the structure. These properties make Razar Tape® a highly effective yet inexpensive form of perimeter security. Razar Tape® can be added to existing or incorporated in new fencing to increase the security of any perimeter barrier. Razar Tape® lends itself to almost any site that requires perimeter security. From industrial sites, Government utility sites, Correctional centres or Military, the Razar Tape® range has a product designed to suit. Australian Security Fencing's range of Razar Tape® products are manufactured from first quality spring steel core wire and galvanised steel strip.

### FLAT LOOP

The Razar Tape® Flat Loop range consists of individual loops of barb tape, ready to attach directly onto the top of an existing fence or gate. Flat Loop is ideal for use where the topping needs to be flat against the fence without any overhang either side

of the fence. Flat Loop acts as a deterrent to any attempt to climb over the fence or cut through the fence or boundary. Possible sites: Industrial, private properties, Council sites, Government utility sites.

### CONCERTINA

The Razar Tape® Concertina range provides continuous circular coil in various diameters. The Concertina is formed by clipping adjacent loops to one another at regular points around the circumference. Concertina can be self supporting along the top of the fence line and provides an effective and economical barrier to the top of any fence.

Possible sites: Industrial, private properties, Council sites, Government utility sites.

### BARBLESS RAZAR TAPE®- ANTI CLIMB COIL

Barbless Razar Tape® provides an extremely effective anti-climb barrier whilst removing any sharp edges or spikes that could potentially cause injury. Anti-climb coil, still provides a significant formidable barrier, deterring intrusion by preventing easy access. Anti-climb coil provides an improved strength requiring significantly greater force to cut than regular Razar Tape® products.

Its smooth, non-aggressive appearance allows the product to be installed in any environment/application.

Benefits:

- Smooth in appearance
- Stronger than alternative Razar Tape® products
- Flexible
- No safety risk to the public
- Non-destructive to flora and fauna
- Simple & safe to install

### \*NEW BARBLESS RAZAR TAPE® MONITORING SYSTEM

The Barbless Razar Tape® Monitoring System is an extremely reliable, extra low voltage, security monitor that increases the security of barbless coil barriers.

This product is unique to Australian Security Fencing P/L.

Safe, undetectable pulses are sent along the anti-climb coil to monitor the continuous integrity of the product as well as to detect any attempt to remove or dislodge the product.

The Barbless Razar Tape® Monitoring System can be zoned into sections with each section providing individual area alarms.

The system can be monitored 24/7 or turned off as required.

Insulators are easy to install onto the Barbless Razar Tape.

## PRODUCT SPECIFICATIONS

### SHORT BARB

Short barb Razar Tape® provides a mildly aggressive appearance with a sharp profile to prevent contact. The 10mm barbs are spaced at 25mm centres to discourage any hand hold with a design profile to catch on clothing.

**Blade strip:** 0.5mm galvanised steel.  
10mm barbs in Clusters of 4 at 25mm centres.

**Core wire:** 2.5mm dia drawn heavy galvanised wire.  
Zinc coating 160gms cm.

### MEDIUM BARB

The Razar Tape® range of Medium Blade is the next step up in the product range. It provides a slightly higher security barrier by changing the blade configuration to give a more aggressive and sharper profile. Medium Blade provides a higher resistance to cutting and has a reinforced flange web giving a slightly more robust coil when installed along the top of the fence.

**Blade strip:** 0.55mm thick, galvanised steel.  
304 marine grade Stainless Steel, 22mm long barbs, with cluster of 4 at 34mm centres

**Core wire:** 2.5mm dia drawn heavy galvanised wire.  
Zinc coating 160gms cm.

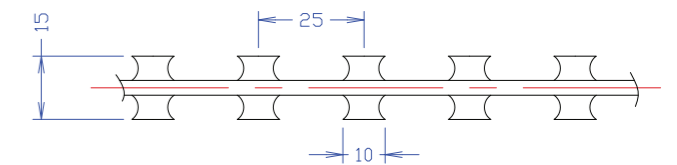

### LONG BARB RAZAR TAPE®

The Razar Tape® range of Long Barb is a specialty product, mainly used in the correctional, detention or military environments. With longer 68mm barbs at 100mm centres, the long barb product is very aggressive. The sharper points on the long barbs make contact dangerously impossible and can cause serious harm if ignored. Possible sites: Correctional centres, gaols, Juvenile Justice, Remands centres, military sites.

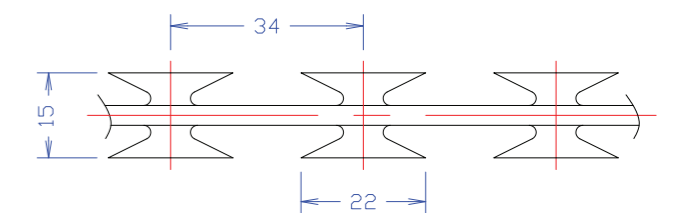

**Blade strip:** Stainless steel marine grade 304.  
68mm long barbs with clusters at 100mm centres.

**Core wire:** 2.5mm drawn heavy galvanised wire.  
Zinc coating 160gms cm.
